Software Engineer

Software Engineering student with a solid background in Backend development and systems architecture. Proficient in data modeling and process optimization with Full Stack experience. Focused on transforming complex problems into efficient software solutions through clean architecture and solid design principles.

Experience

Port Management System

- Full Stack Development (C#/.NET + Angular) for port management, focusing on security.
- Design of RESTful APIs for managing containers and docks, with robust Google IAM integration.
- Result: A scalable and secure system that streamlines port logistics operations, demonstrating proficiency in Full Stack and cloud-based security

Cafeteria Management System

- Developed a canteen system in Java, applying MVC architecture in Spring Boot, DDD and JPA.
- Implemented data persistence, dependency injection, and automated testing, ensuring modularity and maintainability.
- Result: A fully functional system that enables user authentication and management, as well as the administration of products, menus, orders, and billing.

ClinicPro

- Built a clinic management system in C#/.NET using Entity Framework, and DDD, supported by C4 diagrams across all architectural levels.
- Designed and implemented RESTful HTTP endpoints to support full CRUD operations (appointments, patients and doctors), incorporating appointment scheduling logic with conflict detection.
- Result: A scalable and maintainable system with a fully documented API supporting structured clinical workflows.

Skills

- **Back-end:** Spring Boot, .NET, Java, C#
- **Front-end:** Angular, React, TypeScript, JavaScript
- **Databases:** PostgreSQL, Oracle, MariaDB, SQL
- **DevOps & Tools:** GitHub Actions (CI/CD), Git
- **Methodologies:** Scrum / Agile

Education

Software Engineer - ISEP (Instituto Superior de Engenharia do Porto)

2023 - 2026

Current Average: 15.32
